~~Immunodeficiency Disorders: Types, Symptoms, and Diagnosis~~
Interleukin-35 (IL-35) is a recently identified heterodimeric cytokine in the IL-12 family. It consists of an IL-12 subunit ? chain (P35) and IL-27 subunit Epstein-Barr virus-induced gene 3 (EBI3) ? chain. Unlike the other IL-12 family members, it signals through four unconventional receptors: IL-12R?2-IL-27R?, IL-12R?2-IL-12R?2, IL-12R?2-GP130, and GP130-GP130.

~~biology chapter 35 immune system disease Flashcards and~~ ...

Immune system disorders cause abnormally low activity or over activity of the immune system. In cases of immune system overactivity, the body attacks and damages its own tissues (autoimmune...

~~Autoimmune Diseases: What Are They? Who Gets Them?~~

The immune system is your body's defence against infection and disease. If you're ill, your immune system produces antibodies – a special type of protein that destroys disease-carrying organisms and toxins. These antibodies attack the cause of the illness. However, if you develop a problem with your immune system, it can start to attack your own healthy tissues and organs.

~~Addison's disease~~ —Causes —NHS

If it kicks into action too often, you may get a condition like allergies, asthma, or eczema. Or if your immune system starts to attack your body instead of safeguarding it, you could have an...
