Types, Symptoms, and **Diagnosis** Interleukin-35 (IL-35) is a recently identified heterodimeric cytokine in the IL-12 family. It consists of an IL-12 subunit α chain (P35) and IL-27 subunit Epstein-Barr virusinduced gene 3 (EBI3) β chain. Unlike the other IL-12 family members, it signals through four unconventional receptors: IL-12R β 2-IL-27R α , IL-12Rβ2-IL-12Rβ2, IL-12Rβ2-GP130, and GP130-GP130.

biology chapter 35 immune system disease Flashcards Page 14/16

Immune system disorders cause abnormally low activity or over activity of the immune system. In cases of immune system overactivity, the body attacks and damages its own tissues (autoimmune...

Autoimmune Diseases: What Are They? Who Gets Them? The immune system is your body's defence against infection and disease. If you're ill, your immune system produces antibodies — a special type of protein that destroys diseasecarrying organisms and toxins. These antibodies attack the cause of the

illness. However, eif you develop a problem with your immune system, it can start to attack your own healthy tissues and organs.

Addison's disease - Causes - NHS

If it kicks into action too often, you may get a condition like allergies, asthma, or eczema. Or if your immune system starts to attack your body instead of safeguarding it, you could have an...
