The Toyota 3S engine is one of the most popular S-series engines and Toyota as a whole, appeared in 1984 and was produced until 2007. The 3S engine is a belt, every 100 thousand km the belt needs to be changed. During the entire production period, the engine was repeatedly refined, modified, and if the first models were carburetor 3S-FC, then the last is a 3S-GTE turbo with a capacity of 260 hp .

It is possible that the 3 S - FSE damper has an ADC with higher bit depth (accuracy), but in any case the principle is the same. Based on this, we can conclude (and it is confirmed) - there is a "corridor" in the TPS adjustment, the motor will work not only with a VTA of 0.669 V but also at 0.7 V.

On the 3S-FSE engines, the Japanese first used a collapsible nozzle. A conventional injector capable of operating at a pressure of 120 kg. It should be noted that the massive metal case and grooves under the grip meant long-term use and maintenance. The rail with injectors is located in a remote place under the intake manifold and noise protection.
