There are nuclear equations to contend with which are perhaps some of the simplest elements of the A Level course, but then there are conceptually challenging graphs which explain nuclear stability, nuclear binding energy, alpha, beta and gamma decay, fission and fusion. We can use Einstein's famous mass energy equivalence equation to calculate just how much energy is released from a small change in mass!

The following apply for the nuclear reaction: $a + b \rightarrow R \rightarrow c$ in the centre of mass frame, where a and b are the initial species about to collide, c is the final species, and R is the resonant state.

List of equations in nuclear and particle physics - Wikipedia

Classical mechanics is a model of the physics of forces acting upon bodies; includes sub-fields to describe the behaviors of solids, gases, and fluids. It is often referred to as "Newtonian mechanics" after Isaac Newton and his laws of motion. It also includes the classical approach as given by Hamiltonian and Lagrange methods. It deals with the motion of particles and general system of particles.

Branches of physics - Wikipedia

Nuclear physics is the field of physics that studies the building blocks and interactions of atomic nuclei. Atomic physics (or atom physics) is the field of physics that studies atoms as an isolated system of electrons and an atomic nucleus. It is primarily concerned with the arrangement of electrons around the nucleus and the processes by which these arrangements change.
