I read A State of Blood shortly after returning from Uganda, maybe to gain a sense of perspective on the history of this country. It was a compelling read, if a gruesome one. Henry Kyemba gives us his own insights into Idi Amin's regime: what it meant to be living in Uganda at that time but also what led to the regime and how he thought it would evolve (at the time of writing).

Blood, fluid that transports oxygen and nutrients to the cells and carries away carbon dioxide and other waste products. Technically, blood is a transport liquid pumped by the heart (or an equivalent structure) to all parts of the body, after which it is returned to the heart to repeat the process. Blood is both a tissue and a fluid.

In vertebrates, it is composed of blood cells elevated levels of ketone bodies in the blood or urine. Physiologic ketosis is a normal response to low glucose availability, such as low-carbohydrate diets or fasting, that provides an additional energy source for the brain in the form of ketones. In physiologic ketosis, ketones in the blood are elevated above baseline levels, but the body's acid-base homeostasis is maintained. This contrasts with ketoacidosis, an uncontrolled production of ketones
