Space-time adaptive processing (STAP) is a signal processing technique most commonly used in radar systems. It involves adaptive array processing algorithms to aid in target detection. Radar signal processing benefits from STAP in areas where interference is a problem (i.e. ground clutter, jamming, etc.). Through careful application of STAP, it is possible to achieve order-of-magnitude sensitivity improvements in target detection.

~~Space time adaptive processing - Wikipedia~~

STAP techniques filter the signal in both the angular and Doppler domains (thus, the name "space-time adaptive processing") to suppress the clutter and jammer returns. In the following sections, we simulate returns from target, clutter, and jammer and illustrate how STAP techniques filter the interference from the received signal. System Setup

~~Introduction to Space Time Adaptive Processing - MATLAB -~~

Space-time adaptive processing (STAP) is a set of signal processing methods that simultaneously combine signals from an entire array of sensors and from multiple time-intervals. STAP is widely used in radar, to improve target detection in the presence of unrelated and interfering signals,.

spectral analysis of non-stationary random signals, space time adaptive processing: irregularly sa mpled data processing, particle filtering and tracking of varying sinusoids. Suitable for...

~~(PDF) Space Time Adaptive Processing - ResearchGate~~

space-time adaptive processing (STAP) to suppress interference signals received by these radars. There are two types of software capabilities, one is the steady-state performance prediction simulation, which can model the environment of interference signals and the other

~~ADAPTIVE SPACE TIME PROCESSING FOR AIRBORNE RADAR~~

joint space-time-range adaptive processing (STRAP, or joint angle-Doppler-range processing) for MIMO radar. Thus, based upon above analysis, the advantages of STRAP for MIMO radar can be summarized as follows: 1. Solve the problems that MFs cannot separate the waveforms effectively and APC-based cascaded processing

~~Space Time Range Adaptive Processing for MIMO Radar Imaging~~

A technique called space time adaptive processing (STAP) can be used to find targets that could otherwise not be detected. Because the jammer is transmitted continuously, its energy is present in all the range bins. And, as shown in Figure 1, the jammer cuts across the all Doppler frequency bins due to its wideband, noise-like nature.

~~Radar Basics | Part 4: Space-time adaptive processing | EE -~~

1.1 Space-Time Adaptive Processing for Moving Target Indication Moving target indication (MTI) is a common radar mission involving the detection of airborne or ground moving targets. It is based on the fact that the radar echoes of moving targets are Doppler shifted.

~~Space Time Adaptive Processing: Fundamentals~~

Abstract:This tutorial provides a brief overview of space-time adaptive processing (STAP) for radar applications. We discuss space-time signal diversity and various forms of the adaptive processor, including reduced-dimension and reduced-rank STAP approaches. Additionally, we describe the space-time properties of ground clutter and noise-jamming, as well as essential STAP performance metrics.

~~A STAP overview - IEEE Journals & Magazine~~

Figure 1. Adaptive Space-Time Polarization Array . II. Single-Element Limit . Let us first discuss the simplest possible space-time-polarization canceller. This consists of a single dual-polarized element in which interference is cancelled by weighting the output v. 2. of port 2 by a constant w and subtracting it from the output v. 1, of port 1.

~~Principles of Adaptive Space Time Polarization Cancellation -~~

space-time adaptive processing (STAP) provides the optimum signal-to-interference-and-noise ratio (SINR). However STAP normally requires the inverse of the covariance matrix (ICM) of undesired signals in order to form the optimum weights to process the received data. The typical dimension of the covariance matrix (CM) of undesired

~~Evaluation of Pre-Built Space Time Non-Adaptive Processing -~~

It is a spatial adaptive processing technique that is aimed at removing interference. In STAP, or more accurately SAP, the processor places nulls in the

antenna pattern at the angular locations of the interference sources. In SLC, the processor attempts to subtract the interference from the antenna output.

Space-Time Adaptive Processing for Radar 2nd Edition by J R Guerci (Author) 5.0 out of 5 stars 1 rating. ISBN-13: 978-1608078202. ISBN-10: 1608078205. Why is ISBN important? ISBN. This bar-code number lets you verify that you're getting exactly the right version or edition of a book. The 13-digit and 10-digit formats both work.

~~Space-Time Adaptive Processing for Radar: Guerci, J R ...~~

EFA (extended factored approach) algorithm is the main method of space-time adaptive processing technology (STAP) for airborne phased array radar, but it is faced with many problems, such as large number of samples and large amount of calculation. Therefore, this paper uses a method of spatial data dimensionality reduction processing based on cyclic iterative calculation to optimize its STAP.

~~STAP Optimization of Airborne Phased Array Radar in ...~~

Space or time adaptive signal processing by neural network models - NASA/ADS. Part I. Starting from the properties of networks with backward lateral inhibitions, we define an algorithm for adaptive spatial sampling of line-structured images. Applications to character recognition are straightforward. <P />Part II.

~~Space or time adaptive signal processing by neural network ...~~

This course will give you an in-depth overview of space-time adaptive processing (STAP) to radar and review of radar and digital signal processing fundamentals. You'll learn about beamforming techniques, key STAP concepts, critical performance metrics, and practical processing architectures.
