Show that the following system of equation has infinite solution:  $2x + 5y = 10$  and  $10x + 25y = 50$ . Solution: Given system of the equations is  $2x + 5y = 10$  and  $10x + 25y = 50$ .  $2x + 5y = 10$  (1)  $10x + 25y = 50$  (2) By comparing with linear system, we get. a 1 x + b 1 y = c 1. a 2 x + b 2 y = c 2 => a 1 = 2, b 1 = 5, c 1 = 10, a 2 = 10, b 2 = 25 and c 2 = 50

If the variables disappear, and you get a statement that is always true, such as  $0 = 0$  or  $3 = 3$ , then there are "infinite solutions", meaning, when graphed, the two equations would form the same line. If the variables disappear, and you get a statement that is never true, such as  $0 = 5$  or  $4 = 7$ . then there is "no solution", meaning, when graphed, the two equations would form parallel lines, which never intersect.

And before I deal with these equations in particular, let's just remind ourselves about when we might have one or infinite or no solutions. You're going to have one solution if you can, by solving the equation, come up with something like  $x$  is equal to some number. Let's say  $x$  is equal to-- if I want to say the abstract--  $x$  is equal to  $a$ .
