Welcome to my page of solutions to "Introduction to Algorithms" by Cormen, Leiserson, Rivest, and Stein. It was typeset using the LaTeX language, with most diagrams done using Tikz. It is nearly complete (and over 500 pages total!), there were a few problems that proved some combination of more difficult and less interesting on the initial ...

Abstract. Given exponential  $2^n$  space, we know that an Adleman-Lipton computation can decide many hard problems - such as boolean formula and boolean circuit evaluation - in a number of steps that is linear in the problem size  $n$ . We wish to better understand the process of designing and comparing bio-molecular algorithms that trade away weakly exponential space to achieve as low a running ...
