By its definition, cybercrime is the name

given to any criminal activity that involves a computer or a networked device. Most often, a cybercriminal is someone who has a detailed knowledge of technology. They'll often target networks which are unknowingly left unguarded but can also take active steps to try and infiltrate pre-existing firewalls.

Introduction to Cyber Security and Data Protection ...

The key message in this chapter is that an effective Information Security Management System (ISMS) needs to address issues relating to personnel, facilities, suppliers and cultural issues, in addition to the obvious area of information technology, and so information security is a topic that goes well beyond the remit of IT, whether that be the equipment, department or service[1].
