Proper lubrication is critical to successful engine operation. The lubrication system of a modern engine accomplishes three primary purposes: It lubricates surfaces to minimize friction losses. It cools internal engine parts that cannot be directly cooled by the engine's water-cooling system. It cleans the engine by flushing away wear particles.

LUBRICATION SYSTEMS

Engine Lubrication System: Oil Cooler Oil cooler which helps to maintain the engine oil temperature also keeps its viscosity under control. Additionally, It retains the lubricant quality, prevents the engine from overheating and thereby saving it from wear and tear. For more information, please click here.

Scania Industrial and Marine Engines DC16 Set of PDF Manuals

An added benefit of an efficient lubrication system is a reduction in the engine operating temperature because of the heat dissipation through the lubricant system . Turbine engine lubrication is an extremely demanding application for lubricants for several important reasons, as follows: Reliability due to the consequences of failure.
