For people with Type 2 diabetes, being aware of the carb content of food can help with diabetes control. Increasingly, people with Type 2 diabetes who use insulin are being taught about carb counting, both on courses or in consultation with their health care professional. To carbohydrate count successfully, you will need much more information.

Carb counting tips: Avoiding guesswork | Diabetes UK

Carbohydrates (carbs) are in foods like: potatoes, rice, bread and pasta (starches) milk, fruit and honey (sugars) Knowing how many carbs you're eating and drinking helps you manage your blood glucose levels by matching your insulin dose to the amount of carbs in your meals and snacks. This means you do not have to inject and eat at the same time every day (fixed dose), so your treatment is more flexible.

Type 1 diabetes - Counting carbohydrates - NHS

Many of us rely on carbohydrates as our main source of energy. Carbohydrate-containing foods also provide important nutrients for good health. All the carbohydrates you eat and drink are broken down into glucose. The type, and amount, you consume can make a difference to your blood glucose levels and diabetes management.

Carbs & Cals Pocket Counter - Diabetes UK Shop

You can also check this list or use a carb-counting app to find grams of carbs in foods and drinks. For diabetes meal planning, 1 carb serving is about 15 grams of carbs. This isn't always the same as what you think of as a serving of food. For example, most people would count a small baked potato as 1 serving. However, at about 30 grams of carbs, it counts as 2 carb servings. How many carbs should I eat?

Carb Counting Eat Well with Diabetes | CDC

As a Type 1, I use the term "carb counting" to refer to counting the carbs in a meal in order to calculate the amount of bolus insulin I need to take. I sometimes "Watch my carbs" if I feel I'm putting on weight or losing weight, but otherwise just choose what I'd call normal meals and ignore the daily carb total.

Carb counting | Diabetes UK

Mar 13, 2018. #4. What Kaylz and Robin say. Once you get started and know what your insulin to carb ratio is, carb counting does give you much more flexibility to vary the amount of carbs you choose to eat at different meals. This page on the Diabetes UK site is worth a read <https://www.diabetes.org.uk/guide-to-diabetes/enjoy-food/carbohydrates-and-diabetes/nuts-and-bolts-of-carb-counting>.
