A little explanation of how a carburetor works... A carb is a vacuum operated fuel delivery device... Unlike fuel injection, a carb only works when when your engine sucks on it... That is engine vacuum... When the piston in your engine goes down, it sucks fuel from the carb,... the piston goes up, and it blows out of the muffler.

The Mikuni CV carburetor can be tuned via 3 methods, the main jet that controls fuel flow during full acceleration, the needle clip position that controls fuel flow during cruising and roll on throttle, and the mixture screws that regulate fuel flow during idle conditions. The carburator should be tuned first by testing the motorcycle, and noting the characteristics of the idle, roll on and full acceleration.
