Use of collision theory to explain the effect of the size of reactant / total surface area on the rate of reaction. 1. When the size of a fixed mass of solid reactant is smaller, the total surface area exposed to collision with the particles of the other reactants is bigger.

Chemistry Form 5 Chapter 1 [gen5or593xlo]. ... CHAPTER 1 : RATE OF REACTION Rate of reaction is a measurement of the speed of a reaction. Rate of the reaction can be defined as change in volume of gas against time or reduction of a reactant's mass against time.

Chemistry Form 5: Chapter 1 - Effect of Concentration on Rate of Reaction. Experiment to show the effect of concentration on reaction rate. Sodium thiosulphate solution react with dilute sulphuric acid to form a yellow precipitate of sulphur. In this experiment, the time taken for the formation of sulphur to cover the mark 'X' until it disappears from sight can be used to measure rate of reaction.
