Civil and Environmental Systems Engineering is designed for a junior- or senior-year course on systems analysis and economics as applied to civil engineering. This civil system/engineering economics course has evolved over roughly the last 30 years and draws on the fields of operations research and economics to create skills in problem solving.

The Civil and Environmental Systems Engineering MS degree program develops an in-depth understanding of the core methods and their applications with a focus on one or several domains. It is recommended that students take courses on methods (such as economics, data mining and optimization) and technologies (such as smart cities), as well as domain specific courses (such as intelligent transportation systems, smart buildings, water resource systems, environmental systems, smart sensing ...

Pragmatic Considerations: The Civil Engineering major (116 units) provides a structured curriculum that ensures breadth across different areas specified by ABET. The Environmental Systems Engineering major (96 units) offers much more flexibility in choosing courses, and the ability to focus on a specific topic area.

The civil engineering profession is concerned with the built environment. Civil engineers plan, design, and construct major facilities, including highways, transit systems, airports, dams, water and wastewater treatment systems, tunnels, energy facilities, harbors, canals, buildings, and bridges. Civil engineers manage our air, water, and energy resources and protect society from natural catastrophes, such as earthquakes, and the hazards society itself generates in the form of toxic wastes.

These systems are at the core of Civil and Environmental Engineering of the 21st Century. The understanding of how such systems work requires knowledge about the constitutive laws that govern them, such as traffic flow, fluid mechanics, structural mechanics, and smart networks.

Professional Considerations: The Civil Engineering degree is ABET-accredited, while the Environmental Systems Engineering major is not. A degree accredited by ABET (Accreditation Board for Engineering and Technology) is a first step toward a professional engineering license.

We work hard to learn our clients' business and make their goals our goals. We provide integrated expertise in the areas of air quality, civil engineering, ecological sciences, environmental engineering and sciences, manufacturing infrastructure services, survey/geospatial, waste management, and water resources, in addition to other client support services.

US News and World Report ranked CEE 's civil engineering graduate program and its environmental engineering program #1 in the country for 2017. Civil Engineering has been in the top 2 for 14 years in a row and Environmental Engineering has been in the #1 spot for the past 8 years. See menu options at left to learn more about our graduate program.

This major offers the opportunity for a more focused curriculum than the Environmental and Water Studies concentration in the Civil Engineering degree program. The program of study, which includes a capstone experience, aims to equip engineering students to take on the complex challenges of the 21st Century involving natural and built environments, in consulting and industry as well as in graduate school.

Environmental Systems Engineering | Majors

Civil engineers plan, design and construct major facilities including buildings, bridges, water and sanitation systems, transportation systems, energy systems and other civil infrastructure. Civil engineers help manage our air, water and energy resources and help protect society from natural catastrophes such as earthquakes and storms.

The Civil and Environmental Systems minor is brand new for 2016-2017 and is unique because it combines principles and knowledge from across civil, environmental and systems engineering into a hyper-concentrated study focused on both the built and natural worlds. The Minor in Civil and Environmental Systems consists of the following subjects:

Our Environmental Systems Engineering (EVSE) program is very popular with students and respected by industry, largely because of its timely combination of environmental concerns and the systems approach to addressing civil and industrial environmental issues. Areas of study include environmental system design and impact and risk assessment.
