Improve your math knowledge with free questions in "Compound interest: word problems" and thousands of other math skills.

IXL - Compound interest: word problems (Algebra 2 practice)
Solution. When interest is compounded annually, total amount A after t years is given by: A = P (1 + r) t, where P is the initial amount (principal), r is the rate and t is time in years. 1 year: A = 2000 (1 + 0.03) 1 = $2060. 2 years: A = 2000 (1 + 0.03) 2 = $2121.80. 3 years: A = 2000 (1 + 0.03) 3 = $2185.45.

Compound Interest Problems with Detailed Solutions
Solving Compound Interest Problems What is Compound Interest? If you walk into a bank and open up a savings account you will earn interest on the money you deposit in the bank. If the interest is calculated once a year then the interest is called "simpl e interest". If the interest is

Solving Compound Interest Problems
These Compound Interest Worksheets are printable. Students need to use compound interest to solve each word problem focusing on the principal, interest rate, and time.
