Contents. Metrics. Book description. Core Topics in Neuroanesthesia and Neurointensive Care is an authoritative and practical clinical text that offers clear diagnostic and management guidance for a wide range of neuroanesthesia and neurocritical care problems.

Core Topics in Neuroanaesthesia and Neurointensive Care

Core Topics in Neuroanesthesia and Neurointensive Care is an authoritative and practical clinical text that offers clear diagnostic and management guidance for a wide range of neuroanesthesia and neurocritical care problems.

Core Topics in Neuroanaesthesia and Neurointensive Care ...

Along with the traditional topics in neuroanesthesia, there are also chapters dedicated to neuromuscular disorders, central nervous system infections and inflammation, and death and organ donation, as well as ethical and legal issues. The chapters are well written and contain up-to-date information.

Core Topics in Neuroanesthesia and Neurointensive Care ...

Core Topics in Neuroanesthesia and Neurointensive Care is a recommendable book that tackles a fascinatingly vast interdisciplinary field. The editors Basil F. Matta, David K. Menon, and Martin Smith managed to gather an impressive list of authors that reads like a selection of the who's who within both fields (ie, neuroanesthesia and neurointensive care) in the United Kingdom, some other European countries, and the United States.

Core Topics in Neuroanesthesia and Neurointensive Care ...

This chapter describes the tests that are most widely used for monitoring during neuroanaesthesia and neurocritical care, specifically, EEG, somatosensory evoked potentials (SSEPs), brainstem auditory evoked potentials, motor evoked potentials (MEPs) and electromyography (EMG). The main indications for EEG are in the diagnosis and management of epilepsy, sleep studies and neuromonitoring.

[PDF] Books Core Topics In Vascular Anaesthesia Free Download

Since the publication of the first edition of Core Topics in Cardiac Anesthesia, the clinical landscape has undergone significant change. Recent developments include the increased use of electrophysiology, the resurgence of primary percutaneous intervention in acute coronary syndromes, the use of percutaneous devices in patients previously considered inoperable, and the withdrawal of aprotinin.
