Dichotomous Key Definition. A dichotomous key is a tool created by scientists to help scientists and laypeople identify objects and organisms. Typically, a dichotomous key for identifying a particular type of object consists of a specific series of questions. When one question is answered, the key directs the user as to what question to ask next. Dichotomous keys typically stress identifying species by their scientific name, as each individual species has a unique scientific name.

Dichotomous Key: Definition, Uses, Examples | Biology ... Students and professionals use the dichotomous key to identify and classify objects (i.e. people, animals, plants, bacteria, etc.) into specific categories based on their characteristics. Itlls the most commonly used form of classification or type of identification key used in biology as it simplifies identifying unknown organisms.

What is a Dichotomous Key | Step-by-Step Guide with ... A dichotomous key is a method of identification whereby groups of organisms are divided into two categories repeatedly. With each sequential division, more information is revealed about the specific features of a particular organism; When the organism no longer shares its totality of selected characteristics with any organism, it *Page 3/12* 

has been identified

Constructing & Using a Key. Keys are used to identify organisms based on a series of questions about their features. Dichotomous means [branching into two]] and it leads the user through to the name of the organism by giving two descriptions at a time and asking them to choose. Each choice leads the user onto another two descriptions. In order to successfully navigate a key, you need to pick a single organism to start with and follow the statements from the beginning until you find the name.

Keys are used to identify different species. A key will usually ask questions based on easily identifiable features of an organism. Dichotomous keys use questions to which there are only two...

Keys and identification - Classification - GCSE Biology ... Page 7/12

A dichotomous key is a tool that taxonomists often use to classify organisms correctly. It is a form of hierarchical grouping that involves making decisions in a series of steps, from general differences to very specific differences. It is called a di chotomous key because there are always two choices.
