For optimal use of the freezer it is best to defrost it once every 3-6 months. Ice on the inside of the freezer reduces the available space and increases the use of energy. The thawing process can be accelerated by placing hot water in the drawer or placing bowls of hot water in the freezer. This was helpful

The moisture that enters the fridge-freezer with warm air or products will settle on the coldest part, being the back wall. Because the back wall can reach temperatures below freezing, the drops will freeze from time to time. When the fridge-freezer is idle the drops will thaw and flow to the drain of the fridge-freezer.
