Energy efficiency | ABB Energy efficiency: Using
drives to control motors can lead to big savings Nearly
70 percent of all industrial electrical energy use goes
to powering electric motors.

ABB can contribute to energy efficiency improvements in two key ways. First, by providing specialists capable of appraising and monitoring how energy is used and of identifying specific areas for improvement. Second, by providing the equipment, systems and solutions to reduce energy consumption and

ABB Group. Leading digital technologies for industry
In ABB ' s view, the key to making efficient motors while minimizing overall lifecycle costs is to ensure that every stage of design and manufacture is based on high quality. The efficiency of a motor is a measure of how well it converts electrical energy into useful work. Energy which is lost is emitted in the form of heat.
