Check out this Gizmo from [@ExploreLearning!](#) Control the path of a drop of water as it travels through the water cycle. Many alternatives are presented at each stage. Determine how the water moves from one location to another, and learn how water resources are distributed in these locations. Time's Up!

[Freezing Point of Salt Water](#). Launch Gizmo. Control the temperature of a beaker of water. As the temperature drops below the freezing point, a transformation of state will occur that can be viewed on a molecular level. Salt can be added to the water to see its effect on the freezing point of water. Launch Gizmo.

In the [Phases of Water Gizmo](#), students compare what happens to a water sample on a macroscopic scale to corresponding molecular-scale changes. After heating the water to boiling, a magnifying glass can be placed at the boundary between liquid and gaseous water. The resulting molecular view shows that while liquid and gas both have free-flowing particles, the particles in the gas are much farther apart.

In the [Sticky Molecules Gizmo](#), you will discover what causes this "stickiness." You will investigate a variety of phenomena that result from the attraction of molecules to one another. To begin, drag a dropper bottle of Water and a Petri dish (labeled Polarity) to the simulation area. Drag the dropper over the dish to add water.
