We adopted subtractive manufacturing method to fabricate the complete dentures(Fig. 5D). The designed virtual complete dentureshad a thickness of 23.45 mm for upper baseplate, 20.08 mm for lower baseplate, 14.82 mm for upper dentition, and 12.20 mm for lower dentition, as determined using the CAMsoftware.

A WIELAND ZENOTEC T1 milling machine controlled by the CAM software was used to fabricate physical dentitions and baseplates by milling acrylic resin composite plates. The physical dentitions were bonded to the corresponding baseplates to form the maxillary and mandibular complete dentures. Virtual complete dentures were successfully designed using the software through several steps including generation of 3D digital edentulous models, model analysis, arrangement of artificial teeth, trimming ...
