The Barthel ADL Index: Guidelines 1. The index should be used as a record of what a patient does, not as a record of what a patient could do. 2. The main aim is to establish degree of independence from any help, physical or verbal, however minor and for whatever reason. 3. The need for supervision renders the patient not independent. 4.

The Barthel Index - Brain Attack Coalition
The Barthel Index is one of the most widely used rating scales for the measurement of activity limitations in patients with neuromuscular and musculoskeletal conditions in an inpatient rehabilitation setting. It has been used with rehabilitation patients to predict length of stay and to indicate the amount of nursing care needed.

Barthel Index - Barthel Index - Mapi Research Trust

The bladder item for the Barthel Index had fit residuals greater than 2, indicating the likely measurement of another construct (Morton et al, 2008) Multiple items indicated item redundancy and observed proportions deviated significantly from the Rasch model (Morton et al, 2008)

Barthel Index | RehabMeasures Database

The Barthel Index The Barthel index is an ordinal scale that measures functional independence in the domains of personal care and mobility in patients with chronic, disabling conditions, especially in the rehabilitation settings. Two main versions exist: the original 10-item form and expanded 15-item version.

Barthel Index - an overview | ScienceDirect Topics

Barthel Index of Activities of Daily Living Instructions:Choose the scoring point for the statement that most closely corresponds to the patient's current level of ability for each of the following 10 items. Record actual, not potential, functioning.

Barthel ADL Index - British Geriatrics Society

The Barthel Index is designed to measure the ability of an individual with a neuromuscular or musculoskeletal disorder to care for onself. It consists of 10 questions that relate to degree of independence with activities of daily living (ADLs).

Barthel Index - NeurologyToolKit

The Barthel index signifies one of the first contributions to the functional status literature and it represents occupational therapists' lengthy period of inclusion of functional mobility and ADL measurement within their scope of practice. The scale is regarded as reliable, although its use in clinical trials in stroke medicine is inconsistent.

Barthel scale - Wikipedia

Consequently, many widely used health measures—for example, the Barthel index (BI), 4 which is a 10 item measure of physical dependence in personal activities of daily living (PADL)—were developed by choosing items on the basis of their clinical relevance.

The five item Barthel index | Journal of Neurology ...

The primary aim was to provide experience with a functional evaluation instrument (modified Barthel index MBI) that assures the quality of work and identify its deficiencies, familiarize our staff...

(PDF) Stroke rehabilitation: application and analysis of ...

The Barthel Index (BI) measures ten functions that are important for independent living - feeding, bathing grooming, dressing, bowel and bladder continence, toileting, transfers, mobility, and stair use. Items are weighted and scored according to their perceived importance. Higher scores indicate better performance.
