Raman spectroscopy can be used to identify, with a minimum of preparation, minerals, glasses and fluids in geological samples . We therefore present a selection of Raman spectra of minerals representative of some major mineral groups [use search engine]. The spectra provide the main vibrational fingerprints of each main mineral group and related minerals.

Handbook of Raman Spectra for geology

This chapter discusses how infrared (IR) and Raman spectra provides illustrative examples of compounds containing characteristic chemical groups discussed in the book titled The Handbook of infrared and Raman characteristic frequencies of organic molecules. The spectra were selected from the collection of Sadtler Standard Raman Spectra.
