Regulatory Background US federal emission standards for heavy-duty engines are set by the EPA and California standards by the ARB. However, in the heavy-duty engine sector, the federal and California emission standards have historically been well aligned; the differences were relatively minor and in most cases temporary.

The first Harley-Davidson motorcycles were powered by single-cylinder IOE engines with the inlet valve operated by engine vacuum, based on the DeDion-Bouton pattern. Singles of this type continued to be made until 1913, when a pushrod and rocker system was used to operate the overhead inlet valve on the single, a similar system having been used on their V-twins since 1911. ~~Harley Davidson — Wikipedia~~
The first Harley-Davidson was basically a motorized bicycle. That original Harley-Davidson motorcycle had a 24.75 cubic inch (405 cc), single-cylinder, air-cooled engine with an F-head valve configuration. The engine weighed 49 pounds. Today a motorcycle does not really look at all like a bicycle.
