Holt McDougal Algebra 2 1-3 Transforming Linear Functions Step 1 First perform the translation. Translating f(x) = x left 8 units adds 8 to each input value. You can use h(x) to represent the translated function. Check It Out! Example 3 ! Let g(x) be a vertical compression of f(x) = x by a factor of followed by a horizontal shift 8 left units.

Chapter 3 Linear Transformations and Matrix Algebra ¶ permalink Primary Goal. Learn about linear transformations and their relationship to matrices. In practice, one is often lead to ask questions about the geometry of a transformation: a function that takes an input and produces an output.This kind of question can be answered by linear algebra if the transformation can be expressed by a matrix.
