A software bug is an error, flaw or fault in a computer program or system that causes it to produce an incorrect or unexpected result, or to behave in unintended ways. The process of finding and fixing bugs is termed "debugging" and often uses formal techniques or tools to pinpoint bugs, and since the 1950s, some computer systems have been designed to also deter, detect or auto-correct various ...

House centipedes typically have 15 legs and can travel 1.3 feet-per-second, which explains why catching one of these bugs is nearly impossible. The typical response to a house centipede probably involves a shoe, but like almost every other bug out there, this particular bug does have a purpose. And yes, that purpose is actually good.
