Introduction to Probability and Statistics: Principles and ... The relative frequency interpretation of probability leads to the following equation as the general definition of probability: $p(A) = N(A)/N(M)$ where $p(A)$ is probability of outcome (or event) A, $N(A)$ = number of times A occurs in the population, and $N(M)$ = number of members in the population.

Introduction to Probability and Statistics for Projects ... Statistics is concerned with making inferences about the way the world is, based upon things we observe happening. Nature is complex, so the things we see hardly ever conform exactly to simple or elegant mathematical idealisations – the world is full of unpredictability, uncertainty, randomness.

MAS131: Introduction to Probability and Statistics Statistics is about the data and the numbers that are used to analyze the large survey reports, whereas the probability is used to calculate the ratio of favorable events to the overall events of the possible causes.
