After a period of openness towards skepticism of Darwin in the 1960s, there was a revival of Darwinist orthodoxy in the 70s and 80s. Other than those involved with young-earth creationist organizations, there was very little in terms of an attempt at a scientific critique of the Neo-Darwinian synthesis.

Much earlier, Peter Stoner, in *Science Speaks*, demonstrated accidental evolution to be a "statistical monstrosity" from the standpoint of probability theory; Denton demonstrates it to be a biological monstrosity as well. This book is carefully researched and documented, clearly argued, and cogent.

Evolution: A Theory In Crisis by Michael Denton

Evolution: A Theory in Crisis is a 1985 book by Michael Denton, in which the author argues that the scientific theory of evolution by natural selection is a "theory in crisis". Reviews by scientists say that the book distorts and misrepresents evolutionary theory and contains numerous errors.

Evolution: A Theory in Crisis - Wikipedia

"Of all the books that have been critical of Darwinian evolution in recent years, Michael Denton's *Evolution: Still a Theory in Crisis* stands out for doing more than simply compiling the full range of evidence—from cosmology through all of biology to the origins of human language—that goes against a blind, incrementalist view of the development of life.

[Michael Denton: Evolution, A Theory in Crisis, Adler & Adler Publishers 1986, p15.] ? Any suggestion that there might be something seriously wrong with the Darwinian view of nature is bound to excite public attention, for if biologists cannot substantiate the fundamental claims of Darwinism, upon which rests so much of the fabric of twentieth century thought, then clearly the intellectual and philosophical implications are immense.

Evolution: A Theory in Crisis By: Michael Denton

More than thirty years after his landmark book *Evolution: A Theory in Crisis* (1985), biologist Michael Denton revisits his earlier thesis about the inability of Darwinian evolution to explain the history of life. He argues that there remains "an irresistible consilience of evidence for rejecting Darwinian cumulative selection as the major driving force of evolution."

In his 1985 book *Evolution: A Theory in Crisis*, Michael Denton argues for a typological model of nature - a model in which "...all the variation exhibited by the individual members of a particular class [is] merely a variation on an underlying theme or design which [is] fundamentally invariant or immutable" (Denton, 1985, p. 94). This model is in direct contradiction with the evolutionary account of the history of life, in which all organisms are linked by common descent.

Critique of Michael Denton's "Evolution: A Theory in Crisis"

In *Evolution: Still a Theory in Crisis*, Denton shows conclusively that " Nature is in fact a fundamental discontinuum of distinct Types and not the functional continuum maintained by Darwinian orthodoxy [emphasis in original]" (p. 219).

Michael Denton attempts to convince his readers that something is wrong with evolutionary biology. This he does primarily by attempting to resurrect one of the positions that evolutionary biology rendered untenable in the first place, namely the typological interpretation of biological classification systems (or taxonomy).

"Evolution: A Theory In Crisis" by Michael Denton

The 1986 book by Michael Denton, "Evolution: A Theory in Crisis," is a secular critique of orthodox Darwinism. It is thoughtful, logical, empirical and well-written. Denton is sympathetic and fair, showing rare insight and compassion towards Charles Darwin. He distinguishes "microevolution" from "macroevolution."
