Gray - Dear Teacher by Amy Husband

In this sweet and charming tale, the greedy Guzzler is looking for a little something to satisfy his appetite, and what could taste better than a whole cave full of Little Somethings! This Guzzler, however, is very particular. He doesn't want just any old little something. Nothing too skinny or with wings or nasty stings. But what will the remaining Little Somethings do? Jill Lewis is actually two people--Jill Walkinton and Alison Lewis--who combine their talents and experience to bring a fresh and inventive voice to the world of picture books. Illustrator Ali Pye has quickly become a rising star. Her work combines digital and hand-drawn elements, and includes illustrating Marianne Levy's Ellie May series.

Christian Köhler covers the connection between μC and simulation, the interface abstraction as well as the analysis and optimization of

coupling systems with the Chip-Hardware-in-the-Loop Simulation (CHILS) approach. He develops the hardware to simulation coupling system with a focus on less hardware effort, the capabilities to couple with different simulation environments, and the efficiency of coupling. Furthermore, the author presents existing concepts to simulate complex systems and compares them with the new approach.

This book summarizes the experience of many years of teamwork with my group, the beam diagnostics group of GSI. For a long time the group was also responsible for operating the machines and application programming. In my opinion, this connection was very efficient: first, because a beam diagnostic system has to place powerful tools at the operators' disposal; second, because data evaluation and presentation of results for machine operation demand application programs which can be handled not only by skilled experts. On the other hand, accelerator developments and improvements as well as commissioning of new machines by specialists require more complex measurements than those for routine machine operation. A modern beam diagnostic system, including the software tools, has to cover these demands, too. Therefore, this book should motivate physicists, constructors, electronic engineers, and computer experts to work together during the design and daily use of a beam diagnostic system. This book aims

to give them ideas and tools for their work. I would not have been able to write this book without a good education in physics and many discussions with competent leaders, mentors, and c- leagues. After working about 40 years in teams on accelerators, there are so many people I have to thank that it is impossible to mention them all by name here.
