~~| Solute ...~~

What is the difference between a solution and a mixture? In chemistry a solution is actually a type of mixture. A solution is a mixture that is the same or uniform throughout. Think of the example of salt

# Access Free Mixture And Solution For Kids

water. This is also called a "homogenous mixture." A mixture that is not a solution is not uniform throughout. Think of the example of sand in water.

~~Chemistry for Kids: Chemical Mixtures~~

How to make a mixture. You can make your own mixtures with items from around the

## Access Free Mixture And Solution For Kids

house. 1. Firstly try to make a mixture of toys. 2. This time use cereals or sweets. What is a solution? A solution is made when a solid (which we call a solute) dissolves into a liquid (that we call the solvent) One example of a solution is salt dissolved in water.

Kids #19.1 - YouTube~~

Like all mixtures, solutions can be separated. However, it is not always easy to separate them because they are so well mixed. In a sugar-water solution, the water will

# Access Free Mixture And Solution For Kids

eventually evaporate, or change from a liquid to a gas, leaving the sugar behind. In contrast, mixing a cupful of sand into a glass of water will form a mixture that is not a solution.

## Access Free Mixture And Solution For Kids

A good example is a mixture of oil and water. Chemical solutions are usually homogeneous mixtures. The exception would be solutions that contain another phase of matter. For example, you can make a homogeneous solution of sugar and water, but if there are crystals in the solution, it becomes a heterogeneous mixture.
