Background: A dichotomous key is a tool that allows the user to determine the identity of items in the natural world, such as trees, wildflowers, mammals, reptiles, rocks, and fish. Keys consist of a series of "either or" choices that lead the user to the correct name of a given item. "Dichotomous" means "divided into two parts". Therefore, dichotomous keys always give two choices in each step.

Using a Dichotomous Classification Key to Identify Common ...

This activity introduces the concept gradually, first using a pre-made dichotomous key in the identification process. Then they have the opportunity to create their own key with a limited sample size, before using all of the samples to create a more in depth dichotomous key.
