MPLS Network Management - 1st Edition

For signaled connections (ATM or MPLS), this may require just writing to the MIB of the originating node. This is relatively simple. For unsignaled connections (e.g., ATM PVX), the provisioning code may have to write data to each node in the path.

A range of Management Information Base (MIB) modules has been developed to help model and manage the various aspects of Multiprotocol Label Switching (MPLS) networks. These MIB modules are defined in separate documents that focus on the specific areas of responsibility of the modules that they describe. This document describes the management architecture for MPLS and indicates the inter ...
