Fats and oils - Esters, fats and oils - Higher Chemistry ...

One difference between fats and oils is that at room temperature fats are solid whereas oils are liquid. Fats and oils are both made of one part called glycerol attached to three other parts called fatty acids. Glycerol is a thick liquid with many industrial uses. The fatty acids can vary and this makes the different kinds of fats and oils.

Oils & Fats International

Fats and oils can be considered as essential macronutrients of the animal body. Both fats and oils are made up of carbon (C), hydrogen (H), and oxygen (O). The combination of these elements forms chains of molecules called fatty acids. Individual fatty acids can be either saturated or unsaturated molecules.

---

Difference Between Fats and Oils | Definition, Saturation ...

This advice is often oversimplified by labeling the two kinds of fats as bad fats and good fats, respectively. However, since the fats and oils in most natural and traditionally processed foods contain both unsaturated and saturated fatty acids, the complete exclusion of saturated fat is unrealistic and possibly unwise. For instance, some foods rich in saturated fat, such as coconut and palm oil, are an important source of cheap dietary calories for a large fraction of the population in ...
