The note is based on1.1Dimitris Bertsimas and Robert Weis- mantel. Optimization over integers, volume 13. Dynamic Ideas Belmont, Derinition2005. Notation. Set of integers and real numbers are denoted byZandRrespectively. If S Rnis a set, then the set of all integer points in S is denoted by SZ, i.e., SZ= S \Zn.

Geometry of Integer Optimization - GitHub Pages  
An integer programming problem is a mathematical optimization or feasibility program in which some or all of the variables are restricted to be integers.In many settings the term refers to integer linear programming (ILP), in which the objective function and the constraints (other than the integer constraints) are linear.. Integer programming is NP-complete.
