Plant Form and Function Study Guide

Unlike animals, however, plants use energy from sunlight to form sugars during photosynthesis. In addition, plant cells have cell walls, plastids, and a large central vacuole: structures that are not found in animal cells. Each of these cellular structures plays a specific role in plant structure and function. 30.2: Stems

Plant Form and Function
Plants are multi-cellular
organisms, which is an
organisms that consist of
more than one cell. There
also known as eukaryotic
organisms. They have a cell
wall made of cellulose. They
are photosynthetic, meaning
that they convert light
energy to chemical energy by
means of chloroplasts
located primarily in their
leaves.

Plant Form and Function apbiowiki

Plants and animals have both internal and external structures that serve various functions in growth, survival, behavior, and reproduction. (Grades 3-5) LS1.D: Information Processing Plants respond to some external inputs. (Grades K-2) For grades 5 and 6: This lesson is rich in vocabulary and concepts for grades 5 and 6.
