Selection and Speciation 5 Read This! Natural selection, the improved fitness of certain individuals in the population that allows for survival and reproduction, is the primary mechanism by which populations change over time. Other mechanisms include the introduction of a mutation in the population and artificial selection (the effect of humans

Selection and Speciation - Commack Schools

The selection that led to the development of wolves and coyotes was most likely natural selection because humans did not chose the traits that led to the speciation of coyotes from the common ancestor. 19. Refer to Model 1. Is the selection leading to changes in the E. coli variants natural or artificial selection? Explain your
