It is a balanced (CAD and CAM) text with up to date information on rapid prototyping, NT-based solid modeling systems and Web-related issues, all hot topics. Complicated mathematical terminology is kept to a minimum; instead, the concepts are explained in as intuitive a way as possible. Students are required to have a background only in programming, calculus, and matrix and vector algebra.

Principles of Computer-Aided Design and Manufacturing is the product of many years of experience teaching courses in computer-aided design (CAD). My first book, published in 1991, was a challenge—the technology was evolving and both the hardware and software were changing rapidly. Since then we have come a long way in the

concepts underlying CAD/CAM/CAE systems rather than explain the use of specific systems. Some people may argue that it is enough to teach a student how to use existing systems or even a specific popular system because the student as an engineer will be the user – not the developer of such systems.

NX, formerly known as "unigraphics", is an advanced high-end CAD/CAM/CAE, which has been owned since 2007 by Siemens PLM Software. In 2000, Unigraphics purchased SDRC I-DEAS and began an effort to integrate aspects of both software packages into a single product which became Unigraphics NX or NX.. It is used, among other tasks, for: Design (parametric and direct solid/surface modelling)

Principles of Cad/Cam/Cae by Kunwoo Lee  
I used this text in my first CAD/CAM class  
(2001!) and it was already being outdated  
then. But it is the BEST overview of  
CAD/CAM/CAE I have ever read; The  
math and theory is there, yet without being  
hugely detailed on research. But, it simply is  
no longer updated and that is a shame.
