Hutchinson-Gilford progeria syndrome is a genetic condition characterized by the dramatic, rapid appearance of aging beginning in childhood. Affected children typically look normal at birth and in early infancy, but then grow more slowly than other children and do not gain weight at the expected rate (failure to thrive).

Hutchinson-Gilford progeria syndrome: MedlinePlus Genetics

Since Progeria can not be passed on because the child would die before they would be able to give birth there is only one person affected which is our child in the bold black circle. On this pedigree squares equal male, circles equal women and the bold black means that they have the disease.

About Progeria | The Progeria Research Foundation

About PRF. The Progeria Research Foundation (PRF) was established in 1999 by Drs. Leslie Gordon and Scott Berns, the parents of a child with Progeria, along with many dedicated friends and family who saw the need for a medical research resource for the doctors, patients, and families of those with Progeria. Since that time, PRF has been the driving force behind the Progeria gene discovery and ...
