~~fundamentals of gas~~

~~turbines second edition~~

The basic operation of

the gas turbine is a

Brayton cycle with air as

the working fluid :

atmospheric air flows

through the compressor

that brings it to higher

pressure ; energy is then

added by spraying fuel

File Type PDF

Propulsion Of

Gas Turbine
Solution Manual

into the air and igniting it so that the combustion generates a high-temperature flow ; this high-temperature pressurized gas enters a turbine, producing a shaft work output in the process, used to drive the compressor ; the unused energy comes out in the exhaust gases that can be ...
