~~What are the two basic types of steam turbines? Answers: Impulse type. Reaction type. What is the operating principle of an impulse turbine? Answer: The basic idea of an impulse turbine is that a jet of steam from a fixed nozzle pushes against the rotor blades and impels them forward. The velocity of the steam is about twice as fast as the velocity of the blades.~~

*Question & Answers on Steam Turbines*

Answer: Topping and superposed turbines arc high-pressure, non-condensing units that can be added to an older, moderate-pressure plant. Topping turbines receive high-pressure steam from new high-pressure boilers. The exhaust steam of the new turbine has the same pressure as the old boilers and is used to supply the old turbines.

*Question & Answers Steam Turbines - MassEngineers.com*

Answer : The impulse turbine is characterized by the fact that it requires nozzles and that the pressure drop of steam takes... The reaction turbine, unlike the impulse turbines has no nozzles, as such. It consists of a row of blades mounted on a... In the case of reaction turbines, the pressure ...

Steam turbine | Steam turbine Objective Type Questions and answers; 1. Da-laval turbines are mostly used..... A. Where low speeds are required. B. For small power purposes and and low speeds. C. For small power purposes and and high speeds. D. For large power purposes

*Steam turbine objective questions (mcq) and answers*

Question & Answers on Steam Turbines. How can the deposits be removed? Answers: Water soluble deposits may be washed off with condensate or wet steam. Water insoluble deposits are removed mechanically after dismantling the turbine. Experience shows that water soluble deposits are embedded in layers of water-insoluble deposits.

*Question & Answers on Steam Turbines*

Interview Short Question Answers on Steam Turbines. Q. What is the purpose of a Regenerative Rankine cycle used in a steam turbine? It is applied to a multi-stage turbine. Steam is withdrawn from in between the various stages to heat feed water through a series of feed water heaters. it preheats water on its way from the condenser to the boiler ...

*Interview Short Question Answers on Steam Turbines-3 - ME ...*

Answers: A steam turbine is a prime mover that derives its energy of rotation due to conversion of the heat energy of steam into kinetic energy as it expands through a series of nozzles mounted on the casing or produced by the fixed blades.

*Question & Answers on Steam Turbines*

Answers: Wet steam produced usually by injecting cold condensate into the superheated steam, is introduced to the turbine which is kept on running at about 20% of nominal speed. For backpressure turbine the exhaust steam is let out into the open air through a gate valve.

12 STEAM TURBINE OPERATION QUESTION ANSWER. Hello ! power engineers today we discussed about the 12 STEAM TURBINE OPERATION QUESTION ANSWER . these question answer is helpful for those who worked as a turbine operation engineer and who want to know more about the turbine operation . turbine is critical component of any power generation plant because its consist very critical component like ...

*12 STEAM TURBINE OPERATION QUESTION ANSWER - ASKPOWERPLANT*

The exhaust steam of the new turbine has the same pressure as the old boilers and is used to supply the old turbines. What is an extraction turbine? Answer: In an extraction turbine, steam is withdrawn from one or more stages, at one or more pressures, for heating, plant process, or feedwater heater needs. They are often called "bleeder turbines."

*Steam Turbine Auxiliaries Question & Answers*

Hello ! power engineers today we discussed about the MOST IMPORTANT TURBINE OPERATION QUESTION ANSWER . these question answer is helpful for those who worked as a turbine operation engineer and who want to know more about the turbine operation . turbine is critical component of any power generation plant because its consist very critical component like thrust pad , blades , bearing etc. which ...
