~~Reservoir Engineering~~

Reservoir engineering is a branch of petroleum engineering that applies scientific principles to the fluid flow through porous medium during the development and production of oil and gas reservoirs so as to obtain a high economic recovery.

~~Reservoir engineering — Wikipedia~~

Reservoir engineering involves the efficient management of oil and gas reservoirs in a technical and economic sense.

engineering is optimization. The purpose of reservoir engineering is to provide the facts, information and knowledge necessary to control operations to obtain the maximum possible recovery from a reservoir at the least possible cost.

~~What is Reservoir Engineering? — OnePetro~~
Most reservoir engineering calculations involve the use of the material balance equation (MBE). Some of the most useful applications of the MBE require the concurrent use of fluid flow equations. Combining the two concepts would enable the engineer to predict the reservoir future production performance as a function of time.
