In phonology, an allomorph is a variant form of a morpheme. (A morpheme is the smallest unit of a language.) (A morpheme is the smallest unit of a language.) For example, the plural in English has three different morphs, making plural an allomorph, because there are alternatives.

What Is an Allomorph in Phonology and Linguistics?

A phonological rule is a formal way of expressing a systematic phonological or morphophonological process or diachronic sound change in language. Phonological rules are commonly used in generative phonology as a notation to capture sound-related operations and computations the human brain performs when producing or comprehending spoken language. They may use phonetic notation or distinctive ...

In linguistics, an allomorph is a variant phonetic form of a morpheme, or, a unit of meaning that varies in sound and spelling without changing the meaning. The term allomorph describes the realization of phonological variations for a specific morpheme. The different allomorphs that a morpheme can become are governed by morphophonemic rules. These phonological rules determine what phonetic form, or specific pronunciation, a morpheme will take based on the phonological or morphological context in

Allomorph - Wikipedia

Central to phonology are instances that are realized differently in different contexts. Traditionally, it is said that such instances show allomorphy because allomorphy is understood as a situation in which two or more different morphs share the same grammatical or semantic function and hence are allomorphs of one morpheme.

common underlying form by means of a set of (possibly ordered) phonological rules. A nice example of applying this idea of a common underlying form and a set of ordered rules to Dutch allomorphy phenomena can be found in Smith (1973).

Allomorphy and the architecture of grammar*

They also consider a number of important allomorphy questions which Optimality Theory has helped raise and address (e.g. the nature of inputs, the role of paradigms, the interaction of phonology with other modules of grammar, lexical storage vs computation, degrees of phonological (ir)regularity, subcategorization vs markedness).
