A C E Answers |  
Investigation 1

A population commonly contains too many individuals to study conveniently, so an investigation is often restricted to one or more samples drawn from it. A well chosen sample will contain most of the information about a particular population parameter but the relation between the sample and the population must be such as

# Online Library Samples And Populations

to allow true inferences to be made about a population from that sample.

---

3. Populations and samples -

Samples and Population  
Investigation 2.2: Selecting  
a Sample Drawing accurate  
conclusions about a  
population based on a sample  
can be complicated. When you  
choose a sample, it should  
be representative of the  
population. This means the  
sample must have  
characteristics similar to  
those of the population. Not  
all samples are  
representative samples.

Samples description. In this study, mosquitoes from the previously published research results were used to further describe the molecular basis of DDT resistance in *An. funestus* population from different localities [12, 14,15,16]. Mosquito samples generated from the previous investigation were used for genetic analysis in this work.
