Science Of Inheritance Section Review Answer Key

We now know that inheritance is a matter of both genetic and cytoplasmic inheritance. A growing awareness of the centrality of the cytoplasm in explaining both human development and phenotypic variation has been promoted by two contemporaneous developments: the continuing elaboration of the molecular mechanisms of epigenetics and the global rise of artificial reproductive technologies.

Human Inheritance Understanding Main Ideas Fill in the Punnett squares for dimples, a trait controlled by a dominant allele (A), and colorblindness, a trait controlled by a recessive sex-linked allele (B). Then answer the questions that follow. 5. Does either the mother or the father in A have dimples? _____ 6.

4-1 Review and Reinforce

Mendel generalized the results of his pea-plant experiments into four postulates, some of which are sometimes called “ laws, ” that describe the basis of dominant and recessive inheritance in diploid organisms. As you have learned, more complex extensions of Mendelism exist that do not exhibit the same F₂ phenotypic ratios (3:1).
