the simulation, the underlying model for the detection of bird strikes in the simulation as well as the resulting set-up. This is followed by an analysis of the simulation results. II. METHOD To develop a simulation environment for the analysis of bird strikes, an underlying simulation platform is required. This study relies on the BlueSky Open Air Traffic Simulator developed by Delft University of Technology.

Simulating the Risk of Bird Strikes - ENRAM
In aircraft engineering there is a strong interest in reliable numerical methods for structural design under vulnerability aspects to reduce testing expenses and development time. One major load case is bird strike on aircraft components that are nowadays typically made of composite materials.

The third step deals with the numerical simulation of bird strike experiments on two novel aircraft LE designs. The influence on the numerical results of the critical modelling issues such as the mesh density of the highly impacted areas, the substitute bird flexibility as well as the material damage and contact interfaces parameters are discussed in detail.

DRD has performed finite element analysis to simulate a bird strike on an aircraft windshield for the NORDAM Group's Transparency Division. The NORDAM Group is recognized worldwide as an industry leader in the manufacture, repair and overhaul of aircraft bonded-honeycomb components, fan/thrust reversers, engine components, interiors and aircraft transparencies.

Bird Strike Simulation with ANSYS LS-DYNA — DRD Technology ...
A bird strike—sometimes called birdstrike, bird ingestion, bird hit, or bird aircraft strike hazard (BASH)—is a collision between an airborne animal and a manmade vehicle, usually an aircraft. The term is also used for bird deaths resulting from collisions with structures such as power lines, towers and wind turbines. Bird strikes are a significant threat to flight safety, and have caused a number of accidents with human casualties. There are over 13,000 bird strikes annually in the US ...

Bird strike - Wikipedia
Collisions between birds and aircraft are one of the most dangerous threats to flight safety. In this study, smoothed particles hydrodynamics (SPH) method is used for simulating the bird strike to an airplane wing leading edge structure. In order to verify the model, first, experiment of bird strike to a flat aluminum plate is simulated, and then bird impact on an airplane wing leading edge structure is investigated.

A chicken gun is a large-diameter, compressed-air cannon used to fire dead chickens at aircraft components in order to simulate high-speed bird strikes during the aircraft's flight. Jet engines and aircraft windshields are particularly vulnerable to damage from such strikes, and are the most common target in such tests. Whole, dead, standard-size chickens, as would be used for cooking, are thought to accurately simulate a large, live bird striking a plane in flight.
