Discrete Time Signal

We usually draw discrete-time signals as stem plots to emphasize the fact they are functions defined only on the integers. We can delay a discrete-time signal by an integer just as with analog ones. A delayed unit sample has the expression.
$$\delta(n - m) \quad (n - m) \quad (n - m) \quad (2.4.1) \quad (n - m) \text{ and equals one when } n = m.$$
