What is Statistical Process Control? SPC Quality Tools I ASQ
Statistical Process Control (SPC) is the system of tools used by manufacturing operations worldwide to manage a high quality process with very little process variation. By using these tools companies have improved quality and given engineers a means to drive continuous process improvement in manufacturing as they build all levels of products.

Manage Quality with Statistical Process Control (SPC)
Statistical Process Control (SPC) is an industry-standard methodology for measuring and controlling quality during the manufacturing process. Quality data in the form of Product or Process measurements are obtained in real-time during manufacturing. This data is then plotted on a graph with pre-determined control limits.
