1. Cutting and Dissecting Instruments.

These surgical instruments as the name implies are used for cutting and dissecting the skin, tissue and suture material. These instruments usually have sharp edges which enable the surgeons to cut and dissect tissue so as to explore irregular growths and to remove dangerous or damaged tissue.

Surgical Instruments □ List, Names and Functions - Sutured

Medical instruments come in various materials, shapes, and sizes. The materials and design affect their cleanability.

Instruments with long, narrow lumens, hinges, and crevices present a greater challenge to the cleaning process than solid planar instruments (Lipscomb et al., 2006a). Material incompatibility with cleaning agents and high temperatures
