The Taxonomy Project seeks to create greater precision and transparency in the field of social and emotional learning (SEL) and to facilitate more effective translation between research and practice. This project resulted in Explore SEL, a site designed as a navigator for the field of social and emotional learning. We provide information and tools that summarize and connect the major frameworks and skills in the field to support transparency and informed decision-making.

Wikipedia defines taxonomy as follows:. Taxonomy (from Greek verb tassein = “to classify” and nomos = law, science, cf “economy”) was once only the science of classifying living organisms (alpha taxonomy), but later the word was applied in a wider sense, and may also refer to either a classification of things, or the principles underlying the classification.

**Building a Taxonomy**—**PM Tips**

A taxonomy is a hierarchical scheme for classifying and identifying organisms. It was developed by Swedish scientist Carl Linnaeus in the 18th century. In addition to being a valuable tool for biological classification, Linnaeus’s system is also useful for scientific naming.
