The Second Law of Thermodynamics implies that heat will not transfer from a colder to a hotter body without some external source of energy. Conduction involves the transfer of heat by the interactions of atoms or molecules of a material through which the heat is being transferred.

Chapter 1 Basics of Heat Transfer 1-2 Heat and Other Forms of Energy 1-8C The rate of heat transfer per unit surface area is called heat flux q . It is related to the rate of heat transfer by $q = \frac{Q}{A}$. 1-9C Energy can be transferred by heat, work, and mass.

From the thermodynamic point of view, heat flows into a fluid by diffusion to increase its energy, the fluid then transfers (advects) this increased internal energy (not heat) from one location to another, and this is then followed by a second thermal interaction which transfers heat to a second body or system, again by diffusion.
